# KNIME on AWS: A visual framework for intelligent automation on AWS

End to End machine orchestrated workflows

## Create

## Productionize

### Gather & Transform

On AWS, available in the connected on-premises data center, or securely from the internet

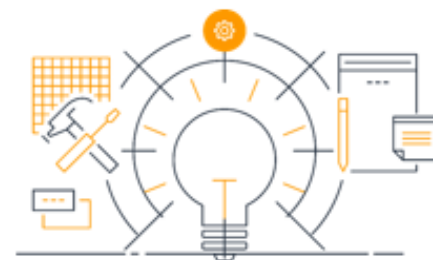

### Explore & Assemble

Over 2,000 native nodes available to enable workflow creation in a visual drag and drop interface

### Deploy & Manage

Support enterprise-wide data science practices, including deployment as a service or application

### Consume & Optimize

Impact your business by rapidly leveraging insights from your data

# Assemble and deploy intelligent automation solutions

Get data for  
Machine orchestration

Translate and  
comprehend text

Personalize consumer  
recommendations

AWS GA services  
based components

Explain outcomes  
of ML models

Understand image  
content

Assist line of business  
forecasting

AWS new preview  
services components

Setup smart  
Q&A

Understand speech  
content

Blend third party  
and enterprise inputs

Python, Java, R code  
visual components
